

IMEX LX25P LASER

The magnetic and self-levelling Imex LX25P laser showed up at a great time for me this issue.

There were plenty of jobs that this tool was going to be tested on including external cladding, V-groove ceiling and installation of a bifold door.

I set up the laser then set the square line along the ceiling – it was so easy to use. Depending on which application you want the laser for there's a vertical/horizontal line or five dot lasers to choose from... or you can use them all at once! When not in use there is a lever that keeps the internal pendulum locked.

On a sunny day the laser is still very

bright, but with the red laser glasses and laser target it is even easier to see and more accurate.

The included base for the laser is also pretty cool and with its strong magnets, set up time is really quick. It is also great for applications where the laser is needed higher than your tripod will reach, including ceilings, high walls or tiling jobs.

The accuracy of the laser is good at +/- 2mm over 10m, which isn't bad for most applications. It's also compatible with the optional detector, which will boost your working distance.

Overall the Imex LX25P is a great laser in a very compact package.

ARTICLE CRITERIA	BUILDING HAND TOOLS Operator Comments Report	STAR RATING (Out of five)
BALANCE	Good self-levelling accuracy	★★★★★
DESIGN	Great design, easy set-up	★★★★★
ERGONOMICS	Easy to hold and re-adjust	★★★★★

OVERALL STAR RATING

Very nice laser. I'm a little sad I don't own one.
